What is Server-less Cloud Printing?

Server-less cloud printing is a modern printing solution that eliminates the need for a dedicated print server or local infrastructure. It enables users to print from anywhere at any time on any device without relying on a specific printer or server.

How does it work?

Cloud printing is a convenient and efficient method of printing that allows users to send print jobs from any device connected to the internet to a printer located in a different physical location. Instead of relying on a direct connection between the device and the printer, cloud printing leverages the power of the internet and cloud computing.

Overall, cloud printing streamlines the printing process, making it more accessible, flexible, and efficient for individuals and businesses alike.

Data Security

Data security is of utmost importance when it comes to server-less cloud printing. As there is no physical server involved in the printing process, data is transferred over the internet and stored in the cloud. It is crucial to ensure that the data is encrypted end to end during transfer and at rest to prevent unauthorized access or interception. Centralized Security Management: Cloud printing allows for centralized security management, simplifying the implementation of security policies and updates across the entire printing infrastructure. Administrators can apply security patches, configure firewall rules, and manage user access from a central console, reducing the chances of security vulnerabilities.

Features

Cutting-edge technology

Print from anywhere at any time on any device

No need for a dedicated server or infrastructure

Supports a wide range of file formats

Central control and management of print jobs

Benefits

Reduced maintenance and management costs

Enhanced security

Easy scalability to add or subtract printers

Cost-effective solution

Flexibility and scalability

Delivered as Software-as-a-Service (SAAS)

Easy to manage and deploy

Reduces the need for IT resources

Improves productivity

Tracks and monitors printing activity
