Kōdo Application for Scan Plus	22/07/21	1475	Kōdo Application for Scan Plus V2.1.905 Release
Mandatory procedure	No	Information only	Yes
Production change	N/A	Free of charge	Yes
Parts change	No	Time required	30 Minutes

Purpose

- Release of Kōdo Application for Scan Plus V2.1.905

Important Information

- All Toshiba eBN devices must be on firmware V1512 or higher
- Backup Queues and Templates using Export Queue / Templates if upgrading from previous version
- Technical Setup, User and Barcode Scripting Guides are included in the download package

Fixes

- Slider appears on the left hand side of the "Scan in Progress" screen on the eS300AC/400AC
- Error "no attribute set state" only occurs on the eS300AC/400AC when the MFD times out in the middle of an unfinished scan and the User tries to use the application again
- All scanned images end up in one PDF document during a Job Split task
- Filename and folder name are based only on the first page's barcode during a Barcode Job Split task
- When selected Omit Blank Page did not work

Enhancements

- Barcode Scripting
- Improvements to the zone-based barcode recognition by adding DynamicSplitting variable for both multiple and single barcodes
- A "None" option selection is now included in the "Date Format" settings
- Email and USB are now default Templates
- Scan Plus can be used immediately without pre-configuration in TopAccess
- A warning message is displayed at the bottom centre of the screen while a USB device is in use. The message will disappear when it is safe to remove the USB device
- Filename Prefix generation from Metadata
- Reduced lag when using the display on the MFD

Note

- Download package includes the application, sample workflows, sample QR codes and guides

Support

A login with technical access is required to download Firmware and Applications from the Toshiba Business website. For any enquiries, please contact your Toshiba Australia Pty Ltd EID Technical Support Specialist
