

Kōdo App for TechnologyOne ECM

Seamless, Secure, and Intelligent Document Capture

Transform the way your organisation captures, processes, and manages documents with Toshiba's embedded MFD application, purpose-built for TechnologyOne ECM. Designed to eliminate complexity and improve efficiency, this powerful solution enables secure, intuitive document workflows directly from your Toshiba multifunction device.

Key Benefits

Streamlined Document Capture

Capture and register documents directly into TechnologyOne ECM without additional systems or complexity.

Enhanced Security & Compliance

Protect sensitive information with secure, encrypted transmission and trusted authentication.

Improved Productivity

Simplify workflows with intelligent automation, reducing manual processes and saving time for staff.

User-Friendly Experience

Empower both general staff and records teams with a clean, simple, and intuitive interface.

Core Features

Seamless Integration

- Native integration with TechnologyOne ECM
- Supports both on-premise and cloud environments
- No middleware or server infrastructure required

Secure & Connected

- Secure point-to-point encryption for safe data transfer
- Single Sign-On (SSO) with OAuth for a streamlined login experience

Efficient Document Capture

- Quick Add Profile (QAP) for fast, repeatable workflows
- One-touch scan settings for consistent results
- Job build functionality to combine multiple scans into a single record
- Job split capability for separating documents automatically

Smart Metadata & Processing

- Precise entry at the panel for quick document descriptions
- Auto registration of records to minimise manual input
- Soft proof with edit to review and adjust before submission

Image Quality Optimisation

- Built-in standard image clean-up to enhance scan clarity and readability

Designed for Every User

- Simple, intuitive UI for both general staff and records management teams
- Minimises training requirements and reduces user errors
- Sticky settings for faster re-use of workflows

Kōdo App for TechnologyOne ECM is ideal for:

Government agencies

Education institutions

Healthcare organisations

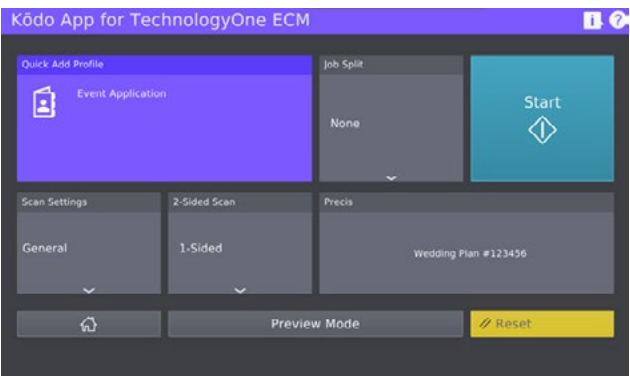

Enterprises using TechnologyOne ECM

Users can quickly capture and upload hard copy documents to TechnologyOne ECM by simply selecting the appropriate QAP and pressing Start. Preconfigured one-touch scan templates eliminate complexity, automatically applying the correct settings for different document types without the need for manual adjustments.

During the process, users can add Precis content to improve document searchability and retrieval. Large batches are easily managed with the job split feature, which separates document stacks, while preview mode enables on-screen verification and editing before final submission.

Toshiba’s embedded solutions are designed to integrate seamlessly into your existing environment, delivering enterprise-grade performance without added complexity.

By combining security, usability, and intelligent automation, this application ensures your organisation can manage documents faster, more accurately, and with complete confidence.

System Requirements

Compatible MFDs

e-BRIDGE Next II/III (check with your Toshiba representative)

Authentication enabled for OAuth (MFD User Authentication, e-BRIDGE Global Print, PaperCut MF/Hive)

Supported Versions

TechnologyOne ECM 2021A or later

Options Available

Authentication	Basic, OAuth
