

SECURE PRINTING

You secure your staff access - but what about your companies intellectual property?

Pull Printing allows a user to print and collect a document from any location and device anywhere within your organisation. This pull printing solution, often referred to as 'FindMe' printing, improves your employee productivity by helping them to work faster and more efficiently.

In an increasingly eco-friendly environment, pull printing allows your organisation to reduce paper wastage and printing costs. Jobs are only released when users identify themselves at the device with either a swipe of an existing security card or pin number release, therefore no more needlessly printed paper left at the printer.

Organisations with a number of Multi Function Printers will feel the benefit of this solution, giving users the ability to send documents to different departments, levels and across different servers throughout your organisation.

Benefits

Toshiba's pull printing solution can help your business to do more with less equipment and valuable capital resources. Pull printing will allow organisations to have less devices and do more by allowing users to collect their work from any device on the network with pull printing installed. The feature allows organisations to move away from dedicated devices on desks to a "kiosk" style print facility.

Reduce costs and paper wastage

Users are able to release and collect their documents at the device eliminating needless printing, reducing print costs and paper wastage.

Eco friendly

By eliminating needless printing, your organisation is endorsing more ecofriendly work practices.

Better security

Releasing and collecting documents from the device itself will eliminate the risk of sensitive information leakages.

Monitor and control printing

Comprehensive reports allow businesses to actively track all user printing activities, thus providing the recognition of printing inefficiencies and therefore enabling improved printing practices.

Better productivity

A user's ability to print from anywhere enables better workflow. If one printer is out of order, this won't impact a user's ability to print.
